

Valmet Fabric for FoilForce 1 Tail Threading Unit

Guarantees optimal threading performance

FoilForce 1 is part of OptiForce Concept, Valmet's automated and ropeless tail threading solutions for all board and papermaking lines. The new Valmet FoilForce fabric guarantees the most reliable tail feed in combination with FoilForce 1.

Benefits

- Edge reinforcement prolongs the life of the fabric
- Temperature treatment guarantees dimensional stability
- Runs clean and is easy to keep clean
- High wear, temperature and moisture resistance

Excellent features

This new fabric is specially designed for Valmet's FoilForce 1 units. The fabric holds the forward-running tail on the surface with the help of under-pressure created by the unit's foils. The permeability and grip ensures the optimal tail threading.

It is made from a polyester material that has been stabilized against hydrolysis in the same way as actual dryer fabrics, significantly improving long-term heat resistance.

Combining the FoilForce 1 tail threading unit with a fabric from Valmet provides shorter tail threading times and ensures reliable operation.

Optimal permeability
