

Rubber-Covered Steel Roll

for roll handling systems

Valmet's rubber-covered steel roll model protects the surface layers of a paper roll against damage during the ejection and reception of a paper roll. This way, customer rolls are always in impeccable condition for printing houses and further processing.

Benefits

- Less broke from surface layers
- Fewer complaints from printing houses

Valmet's new soft, rubber-covered roll can replace the metal roll used so far in roll kickers and cushion stops. The benefits of a soft, rubber-covered roll come out especially with coated paper grades.

Customized rolls

Valmet always customizes a suitable rubber-covered roll for customers based on the dimensions of the old metal roll.

Hardness options for a ground, rubber-covered steel roll are 40 ShA and 60 ShA.

Length options:

- L= 240
- L= 1150
- L= 1480
- L= 1800
