PRODUCT UPDATE BULLETIN PUB #10703

Stonel™ Prism™: PI98 model with ASi-5 technology now available

We are excited to announce that the Stonel Prism PI98 is now available, offering advanced diagnostics with ASi-5 technology. ASi-5 is a 2-wire network that eases deployment and utilizes advanced diagnostics. The diagnostic information is obtained through the ASi-5 data highway for both the PI98S and PI98W models, and via Stonel Wireless Link with the PI98W.

New features with the ASi-5:

- Increased network range to 200m.
- New advanced diagnostics and alarms
 - Cycle count - exceeding a threshold
 - Closed or open Stroke time - exceeding a max or min time
 - Valve open/closed position alarm - beyond percentage
 - Alarms generate an “event” on the network that can be seen at the master, transferred to higher levels (PLC/DCS), and read by ASi-5 tools
- New Configuration screen with Wireless Link models (PI98W) eases setup

To order, use model PI98W for the ASi-5 Prism with Wireless Link support or the model PI98S for just ASi-5 support with diagnostics. Diagnostics settings can be managed via ASiMon control tools or the Wireless Link app. ASi-5 devices can co-exist with ASi-3 devices when used with ASi-5/3 gateways that are now available. Pricing is all available in the Price books posted to Business Center. The initial release will be for general purpose applications. More information regarding the PI98 and ASi-5 can be found on our [website](#); including the IMO and technical bulletin. Prism PI98 training will be available in the upcoming months.

If you have any questions, please do not hesitate to contact me, or Kevin Hufnagle.
