FieldLink® Integrators

Connecting you to success with
field-based communication technologies.

connecting the process

FieldLink® Integrators. Here to help you.

c o n n e c t i n g t h e p r o c e s s

In 1989, StoneL® began manufacturing valve monitors for the process industries. Since then, hundreds of thousands of STONEL valve monitoring systems have been installed in process environments throughout the world. This success, combined with our extensive process industry experience, led to the development of FieldLink®, the industry-leading products and services that enable you to easily realize the benefits of proven, field-based communication technologies.

Since FIELDLINK's introduction in 1998, its usage has grown rapidly. Every year, more companies in more process industries adopt FIELDLINK. To keep pace with this growth — and to make sure you're comfortable adopting communication technologies — we've developed an exceptional network of integrators. And they're ready, willing and able to help you take advantage of the benefits of this exciting technology.

What your FIELDLINK Integrator will do for you.

Your FIELDLINK Integrator offers all the service and support that your fieldbus project could possibly require. This covers

- initial cost evaluation and analysis
- system design layout
- installation
- commissioning

- comprehensive training for your staff
- ongoing 24/7 service and support

Any organization that is not capable of providing this range of service to you is not eligible to become a FIELDLINK Integrator.

How we choose our FIELDLINK Integrators

FIELDLINK Integrators receive extensive training to ensure you receive outstanding service.

Every FIELDLINK Integrator has to be ready to deliver the support you need — 24 hours a day, seven days a week.

It's not easy to become a FIELDLINK Integrator. And not every organization qualifies.

First of all, we look for regional organizations with working capabilities in the process industries. We expect our FIELDLINK Integrators to have

- control systems expertise (PLC, DCS)
- process control software and hardware integration capabilities
- expertise in multiple communication protocols
- electrical and instrumentation engineering and design skills
- comprehensive installation, commissioning and startup abilities
- 24/7 service and support

Once an organization has proven its capabilities in all of these areas, we train its engineers in the specifics of FIELDLINK products and services. Training combines comprehensive classroom instruction with hands-on experience.

After training is completed, each organization must pass a written exam to finally earn the title of FIELDLINK Integrator. In addition, we communicate frequently with our FIELDLINK Integrators, and require them to receive additional training whenever we introduce a new FIELDLINK technology.

We've engineered FIELDLINK to be the best product of its kind. So it's only natural that we hand-select our FIELDLINK Integrators from among the best organizations out there.

Where can you find a FIELDLINK Integrator?

There's a complete and current list of all FieldLink Integrators at the STONEL website. Direct your browser to www.stonel.com/flidirectory to find the one closest to you. And take the next step toward greater productivity by letting STONEL help you connect the process.
