

Neles[™] NDX[™] 2.0

The next generation
intelligent valve controller

Designed for

Sustainable performance

- ✓ **Reduce** air consumption by up to 90%
- ✓ **Reduce** process waste and variability
- ✓ **Reduce** electricity consumption and CO₂ emissions

Reliability and ease of use

- ✓ **Reliable** magnetic sensing and potted electronics
- ✓ **Reliable** 40 micron air filtration rating
- ✓ **Easy** commissioning with a touch screen
- ✓ **Easy** diagnostics with recommended actions

Valve controller energy saving calculator

Valmet's next generation **Neles™ NDX™** intelligent valve controller consumes approximately 80 to 90% less air than conventional controllers, making it an ideal solution to help your plant reach its environmental targets.

Estimate your energy savings

The **Neles™ NDX™ 2.0** has universal performance, meaning it can be put on top of any valve or actuator. The next-generation valve controller is a versatile solution for all actuator sizes, linear or rotary action.

The Neles NDX 2.0 has been designed to meet the needs of varying markets and industries, like petrochemical, chemical, and oil and gas. It provides interoperability to the most common automation systems.
