

Valve Automation Solutions by Valmet

On top of your valves

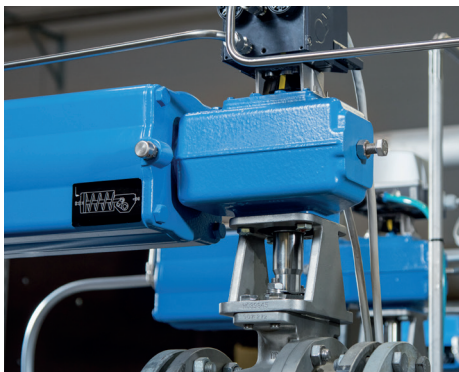

We offer a full valve automation package – positioners, actuators and instrumentation included – commissioned and ready for DCS integration. When you have the right valve for the job, we will handle everything on top.

And when we say everything, we mean **more** than just the main components. You receive the optimal solution with validation for your valve:

- Actuator sizing selection
- Mounting interface
- Approval requirements
- Testing specifications
- Documentation essentials

And just as important as the technology itself is, so too is expecting high quality and performance. We ensure fast quotations, reliable products, and timely delivery. And from your first quote to final delivery and beyond, you receive full life cycle support.

Valve Automation Solutions by Valmet

**We offer everything you need on top of your valves
to ensure they perform at their very best**

Intelligence

Valve controllers

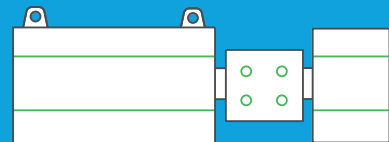

Intelligence is based on data. Our solution includes everything needed for valve control and communications, ranging from controllers to safety solenoids, limit switches and beyond.

Power

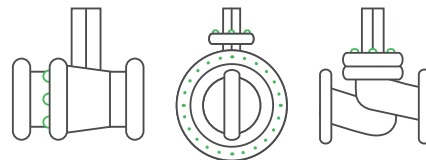

Actuators

The power to perform comes from actuation. You can find all actuator components, from actuator frames to spring and pneumatic cylinder modules, for your optimal assembly.

Your core

Our offering complements the heart of the automated valve assembly – **your valve** – perfectly, with all the needed mounting hardware and instrumentation, ensuring high quality and performance.
