

# Integrated palletizing and wrapping system

Tailor-made end-of-line solution

The launch of **Casmatic PalMate PR7** together with **Casmatic RingWrap S80** marks a major innovation for Valmet: for the first time, we integrate a complete palletizing line, introducing a new family within its packaging systems portfolio. This solution is designed to optimize product handling, ensuring continuous and synchronized operations, high precision in layer preparation and full flexibility across different formats.

With coordinated movement, pallets are configured to be stable and compact, with optimized loading patterns and secure wrapping supported by next-generation ring technology. Integration is simple and immediate, further enhanced by flexible automatic labeling which ensures full traceability.

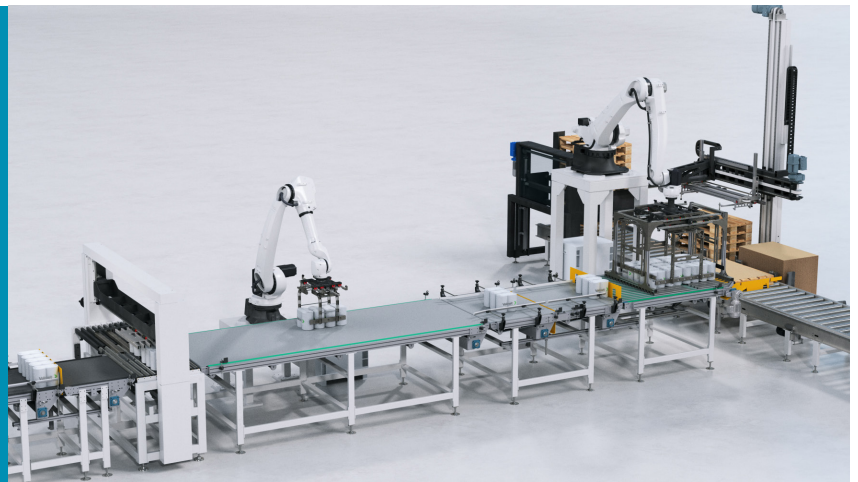

Precision and reliability are at the core of our design. With versatile layer patterns tailored to every loading need, stable layers are formed with precision. The advanced ring technology supports smooth and safe operations throughout the process.

## Casmatic PalMate PR7

**PackGate**  
Up to 23 cycles/min

**Robot layer preparation**  
Up to 23 cycles/min

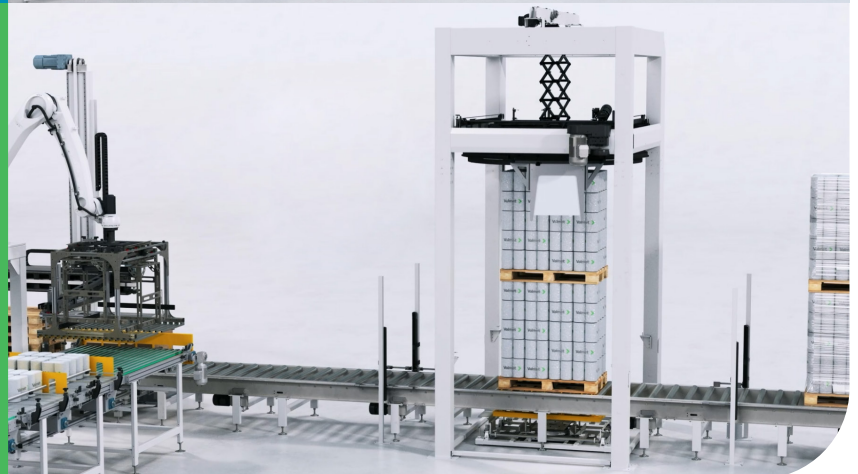

**Robot layer palletizer**  
Up to 7 cycles/min

## Casmatic RingWrap S80

**Maximum speed**  
Up to 80 pallet/h  
Depending on pallet height and product

**Pre-stretch value**  
Up to 400%  
Depending with film thickness

# Key benefits

## Maximized productivity

Continuous, synchronized operations minimize downtime and speed up the palletizing process.

## Enhanced precision

Advanced tracking and optimized layer patterns ensure flawless, stable stacking with precision.

## Wide flexibility

Adaptable to various product types and packaging needs, fitting perfectly any production requirement.

## Scalable integration

Easily integrates with your existing systems and scales with your business growth.
